**Physiology and Biophysics, Doctor of Philosophy (Ph.D.)**

**Program goals**

1. The program is designed to provide students with the skills required to advance to positions as bioscience researchers and trainers in a broad spectrum of positions.
2. The structure of the program provides a framework for the progressive development of a mastery of the current state of the subject matter of bioscience, an ability to synthesize this information and apply this foundation to the identification of key areas of investigation and experimentation in bioscience.
3. The program relates the above framework to the development of the ability to design, implement and interpret experimental approaches which address the questions identified.
4. In addition, the program will develop skills in the various means of communicating both the core of bioscience knowledge and the expression of experimental design, results and interpretation to a variety of potential audiences.

**Student learning outcomes**

1. Problem-solving skills: Degree candidates will demonstrate an appropriate level of skill in the identification and selection of meaningful problems to be addressed in bioscience research, including the ability to defend said identifications and to design and develop appropriate methods to solve said problems as measured by rubric.
2. General knowledge of sciences: Degree candidates will demonstrate an appropriate level of knowledge of the current elements of the biosciences as related to disciplinary specialization and a more detailed understanding of the individual area of scholarship, including an appropriate familiarity with the research literature and the ability to evaluate and critique publications, as measured by rubric.
3. Communication skills: Degree candidates will demonstrate that an appropriate level of oral, written and visual communication skills have been acquired.
   a. Oral communication skills: Degree candidates will demonstrate the achievement of an appropriate level of oral communication skills with respect to the content, organization, logical flow, presentation and appropriate use of language incorporating the use of visual aids, as measured by rubric.
   b. Written communication skills: Degree candidates will demonstrate the achievement of an appropriate level of written communication skill with respect to grammar, syntax, spelling and use of vocabulary to effectively present information including the use of figures, tables and citations as measured by rubric.
4. Experimental design: Degree candidates will demonstrate the achievement of an appropriate level of competence in the ability to appraise, modify and/or create, and implement experimental protocols and to design and develop experiments as measured by rubric.

**VCU Graduate Bulletin, VCU Graduate School and general academic policies and regulations for all graduate students in all graduate programs**

The VCU Graduate Bulletin website documents the official admission and academic rules and regulations that govern graduate education for all graduate programs at the university. These policies are established by the graduate faculty of the university through their elected representatives to the University Graduate Council.

It is the responsibility of all graduate students, both on- and off-campus, to be familiar with the VCU Graduate Bulletin as well as the Graduate School website (http://www.grad.vcu.edu) and academic regulations in individual school and department publications and on program websites. However, in all cases, the official policies and procedures of the University Graduate Council, as published on the VCU Graduate Bulletin and Graduate School websites, take precedence over individual program policies and guidelines.

Visit the academic regulations section for additional information on academic regulations for graduate students. (http://bulletin.vcu.edu/academic-reg)

**Degree candidacy requirements**

A graduate student admitted to a program or concentration requiring a final research project, work of art, thesis or dissertation, must qualify for continuing master’s or doctoral status according to the degree candidacy requirements of the student’s graduate program. Admission to degree candidacy, if applicable, is a formal statement by the graduate student’s faculty regarding the student’s academic achievements and the student’s readiness to proceed to the final research phase of the degree program.

Graduate students and program directors should refer to the following degree candidacy policy as published in the VCU Graduate Bulletin for complete information and instructions.

Visit the academic regulations section for additional information on degree candidacy requirements. (http://bulletin.vcu.edu/academic-reg/grad/candidacy)

**Graduation requirements**

As graduate students approach the end of their academic programs and the final semester of matriculation, they must make formal application to graduate. No degrees will be conferred until the application to graduate has been finalized.

Graduate students and program directors should refer to the following graduation requirements as published in the Graduate Bulletin for a complete list of instructions and a graduation checklist.

Visit the academic regulations section for additional information on graduation requirements. (http://bulletin.vcu.edu/academic-reg/grad/graduation-info)

**Other information**

**Department handbook**

Applicants and students may request a handbook with additional information, which is also summarized on the departmental website (physiology.vcu.edu/education/phd)

Special requirements

- Applications for the program must be submitted to the Biomedical
  Sciences Doctoral Portal – School of Medicine – Ph.D. selected from
  the drop-down menu of programs on the VCU online application form.

In addition to the general admission requirements of the VCU Graduate
School (http://bulletin.vcu.edu/graduate/study/admission-requirements),
successful applicants will typically have the following credentials:

1. A baccalaureate degree or its equivalent at the time of enrollment,
   with an undergraduate GPA of 3.5
2. Current GRE scores (taken within the past five years), with scores at
   the 75th percentile or greater preferred
3. TOEFL scores of 600 (pBT), 250 (cBT) or 100 (iBT) for individuals for
   whom English is a second language; or 6.5 on the IELTS (To report
   GRE or TOEFL score, use VCU Code 5570.)
4. Personal statements, which should include: long-term career goals
   to assess reasons behind the candidate’s application; how a Ph.D. in
   biomedical science helps achieve those goals; the factors motivating
   a career in research; research experience, including dates, places and
   duration
5. Three letters of recommendation that speak to the scientific
   competency and experience of the applicant
6. The equivalent of two semesters of general chemistry, two semesters
   of organic chemistry and two semesters of upper-level biology
   courses (e.g. cell biology, molecular biology, biochemistry, genetics,
   neuroscience, physiology, biophysics, etc.)

Degree requirements

Graduate study in the Department of Physiology and Biophysics in the
School of Medicine is a highly individualized undertaking, of which
required course work is only one component. Each student’s program is
tailored to meet his or her particular interests, with the primary emphasis
on developing research skills and the capacity for scholarship.

Opportunities for research experience begin in the first year, when
students spend time working in several faculty laboratories of their
choice. These lab rotations enable students to examine current faculty
research projects and choose their areas of specialization. In the second
and subsequent years, increasingly more time is devoted to independent
research under the guidance of a faculty adviser. Department-sponsored
seminars give students opportunities to discuss their research interests
with visiting scientists and many students present their work at national
professional meetings.

The Ph.D. program in physiology and biophysics normally takes at
least four years to complete. The first two years are devoted mainly to
course work. The first year consists primarily of required courses, while
the second is geared toward electives and research. On satisfactory
completion of two years of course work, students must pass written
and oral comprehensive examinations to qualify for degree candidacy.
Following admission to candidacy, each student must conduct a
substantial original research project, prepare a written dissertation and
defend it successfully in an oral examination.

In addition to the general VCU Graduate School graduation requirements
(http://bulletin.vcu.edu/academic-regs/grad/graduation-info), students
must complete a minimum of 66 credit hours for the Ph.D., including
directed research.

Other courses as approved by the program
1 Note: This is a modular course; the full course is five credit hours, but students may choose to take a subset of the modules for fewer hours.

2 Note: Another critical-thinking course may substitute for this requirement, e.g. HGEN 691 or IBMS 630.

**Directed research and additional courses (variable credits)**

Select additional credits in the following to amass the variable minimum of 66 credit hours:

</tr>
</thead>
<tbody>
<tr>
<td>PHIS 697</td>
<td>Directed Research in Physiology</td>
</tr>
</tbody>
</table>

Other elective courses approved by the program

**Total graduate credit hours required (minimum) 66**

**Typical plan of study**

Many students often end up taking more than the minimum number of hours required for a degree program. The total number of hours may vary depending upon the program, nature of research being conducted by a study or in the enrollment or funding status of the student. Students should refer to their program websites and talk with their graduate program directors or advisers for information about typical plans of study and registration requirements.
