DATA SCIENCE, CERTIFICATE IN (POST-BACCALAUREATE CERTIFICATE)

The Certificate in Data Science will train students in computer methods for analyzing big datasets generated by industry, research and government entities. Students will learn techniques for transforming the data into knowledge; developing algorithms for constructing computer systems that automatically learn from data; and tracking and evaluating new techniques and approaches in data science. The program will prepare graduates for entry into jobs as specialists in data science for industry and the public sector.

Student learning outcomes
1. **Data science foundations**: Graduates will demonstrate a solid understanding of the foundational concepts underlying data science.
2. **Data science specialization**: Graduates will demonstrate the ability, knowledge and technical skills to process and analyze data in order to extract new insights.

VCU Graduate Bulletin, VCU Graduate School and general academic policies and regulations for all graduate students in all graduate programs

The VCU Graduate Bulletin website documents the official admission and academic rules and regulations that govern graduate education for all graduate programs at the university. These policies are established by the graduate faculty of the university through their elected representatives to the University Graduate Council.

It is the responsibility of all graduate students, both on- and off-campus, to be familiar with the VCU Graduate Bulletin as well as the Graduate School website (http://www.graduate.vcu.edu/) and academic regulations in individual school and department publications and on program websites. However, in all cases, the official policies and procedures of the University Graduate Council, as published on the VCU Graduate Bulletin and Graduate School websites, take precedence over individual program policies and guidelines.

Visit the academic regulations section for additional information on academic regulations for graduate students. (http://bulletin.vcu.edu/academic-reggs/)

Graduation requirements

As graduate students approach the end of their academic programs and the final semester of matriculation, they must make formal application to graduate. No degrees will be conferred until the application to graduate has been finalized.

Graduate students and program directors should refer to the following graduation requirements as published in the Graduate Bulletin for a complete list of instructions and a graduation checklist.

Visit the academic regulations section for additional information on graduation requirements. (http://bulletin.vcu.edu/academic-reggs/grad/graduation-info/)

**Admission criteria**

The admission requirements outlined below apply to all students. All applicants to post-baccalaureate certificate programs are required to submit the online application form to VCU Undergraduate Admissions.

The Department of Computer Science also requires the following additional materials:
- Official undergraduate transcripts from all schools attended
- A resume stating relevant work experience
- A statement of purpose outlining career goals
- Three letters of recommendation – professional and/or academic

To be considered for admission to the certificate program, all candidates must satisfy the following requirements:
- Applicants must already have a bachelor’s degree. A bachelor’s degree in computer science or in a closely related discipline is highly preferred.
- Applicants will be considered on a case-by-case basis, however, candidates should present an undergraduate minimum GPA of 3.0 and have completed at least one semester of calculus and one semester of discrete mathematics (VCU MATH 211 or equivalent), both with minimum grades of B.

Non-native English speakers will provide evidence of proficiency in English by one of the following methods:
- A Test of English as a Foreign Language minimum composite score of 100 for the Internet-based test or score of 600 for the paper-based test
- An International English Language Testing System minimum score of 6.5 on the academic exam

Acceptance of an applicant is based upon the recommendation of the computer science graduate committee with approval of its director and the associate dean for graduate studies.

Students may transfer up to three credits from outside of the program to fulfill the program requirements. The transfer must be approved by the computer science graduate committee.

**Degree requirements**

The focus of the curriculum is centered on the two required courses, CMSC 435 and CMSC 635, which together provide the foundation for more advanced graduate-level elective courses. The main strength of the curriculum is the combination of deep knowledge in machine learning methods and tools provided by the required courses, with the breadth of...
data-oriented training opportunities provided by the electives, allowing
the students to tailor their plan of study toward their professional
interests.

<table>

</thead>
</table>
| Required courses
CMSC 435   | Introduction to Data Science                 | 3     |
| CMSC 635   | Knowledge Discovery and Data Mining          | 3     |

 Restricted elective (choose one) 3

- CMSC 516  Advanced Natural Language Processing
- CMSC 603  High Performance Distributed Systems
- CMSC 630  Image Analysis

 Open elective (choose one) 3

- CMSC 510  Regularization Methods for Machine Learning
- CMSC 516  Advanced Natural Language Processing ¹
- CMSC 601  Convex Optimization
- CMSC 603  High Performance Distributed Systems ¹
- CMSC 630  Image Analysis ¹
- CMSC 636  Artificial Neural Networks and Deep Learning
- CMSC 678  Statistical Learning and Fuzzy Logic Algorithms

Total Hours 12

¹ Course may be used as an open elective if not taken as a restricted elective.

The minimum number of credit hours required for this certificate is 12.
