

ENVIRONMENTAL STUDIES, MINOR IN

The minor in environmental studies provides an overview of the field that offers an intrinsically interesting way for many students to organize elective course work while gaining knowledge important to life in the contemporary world. This program is structured to provide a multidisciplinary introduction to biophysical and social factors that affect the quality of life through the study of the scientific knowledge, policy considerations and ethical issues that constitute environmental issues. When combined with the appropriate major, an environmental studies minor can be useful to students planning careers in any area concerned with environmental processes and problems. The minor also may prepare students for study at the graduate level in concentrations such as ecology and environmental systems.

The minor in environmental studies consists of 21 credits. Required courses are listed. Electives to complete the minor may be selected from ENVS-listed courses and from courses in related departments. Consult the environmental studies program coordinator or adviser for course approvals. At least one course must be taken from the natural sciences and one course from the social sciences. Of the 21 credits, 15 must be outside the student's major department. Twelve credits must be at the 300 level or higher.

Required courses for the minor

Course	Title	Hours
Required courses		
ENVS/POLI 311	Politics of the Environment	3
